EDUCATION

Master in Computer Science - Université Paris Dauphine - PSL

2023 - 2025

Main coursework: Advanced Programming, Distributed Systems and Algorithms, Machine Learning, Advanced Information Systems, Web Data, Intelligent Systems, Web Programming, Database Systems

Bachelor in Computer Science - Université Paris Dauphine - PSL

2020 - 2023

Main coursework: Programming, Mathematics, Databases, Algorithms, Project Management, Graph Theory

PROFESSIONAL EXPERIENCE

Software Engineer Full Stack

Sept. 2024 - Sept. 2025

Bpifrance Apprentice

Paris, FR

- **Design of a multi-layer full stack architecture** (Python, React.js) with clear separation between API layer, business logic, and user interface.
- **Backend development:** implementation of reusable REST endpoints for exposure, NP/WL flows, and risk indicators, with modular structuring and centralized business logic.
- **Implementation of a caching system** (Redis / cachetools) to optimize aggregation processes and reduce query latency by 50%.
- **Frontend development with React.js** including dynamic multi-criteria filters, state management, and interactive visualizations optimized via API calls.
- **Deployment of a cloud data architecture:** ingestion from Amazon S3, ETL orchestration on Dataiku DSS, and exposure via Webapp, with large-scale data processing and transformation (Pandas, PySpark).
- **Technical documentation and code structuring** ensuring maintainability, scalability, and knowledge transfer within the team.

Software Engineer

June 2023 - Aug. 2023

FAW Group Intern (Top 1 automotive manufacturer in China)

Changchun, CN

- **Migration of multiple Java microservices** from Spring Boot 1.5 to 2.7, adapting frameworks and refactoring dependencies to ensure a stable transition to the new architecture and internal infrastructure.
- **Analysis and restructuring of critical business modules** (MES, TDS, vehicle configuration management); UML modeling of application workflows to clarify inter-service dependencies and improve maintainability.
- **Resolution of complex technical issues** related to migration (Feign, Hystrix → Sentinel, Kafka, Mockito, Nacos, Logstash), ensuring CI/CD pipeline stability and production service reliability.

PROJECTS

Trading Hackathon – Full Stack Quant System (PoC Association × Ramify)

2025

- Design and development of a modular trading engine integrating signal generation, decision rules, dynamic capital allocation, and risk management (stop-loss, exposure limits).
- Implementation of a backtesting framework on historical data and performance optimization, ranked 6th out of 132 trade-bots.

AI-Powered Portfolio & Technical Blog

2025

- Development of a personal full-stack website using React.js, TypeScript, and TailwindCSS, integrating an MDX-based blog system optimized for SEO and static site generation (SSG).
- Implementation of an LLM-based conversational assistant enabling interaction with projects, articles, and CV through a RAG system with vector indexing.
- Deployment on Vercel with serverless APIs, caching mechanisms, and performance optimization for a scalable web application.

SKILLS AND INTERESTS

Languages Python, Java, C++/C#, SQL, HTML, CSS, Typescript, React, REST

Tools Linux, Git, Docker, CI/CD, AWS (SAA certification)

Languages French, English, Chinese

Interests Hackathon, Amateur Photography, Cello (15 years of practice), Basketball
